Automatic financial transaction method in central securities depository, involves selecting irrevocable transfer instructions to transfer assets between participants in CSD, for all settlement obligations

Alerting Abstract ...NOVELTY - The method involves selecting irrevocable transfer instructions to transfer assets between participants in central securities depository, for all settlement obligations, and checking whether the instructions are carried out successfully. The result of the settlement is reported to the participants involved.

Original Publication Data by Authority

Argentina

Assignee name & address:

Original Abstracts:

The invention discloses a method for financial transactions within a Central Securities Depository, comprising a clearing process and a settlement process, the clearing process being the process of preparing the transactions for the settlement process, with the clearing process comprising selecting a settlement rule to be followed in the clearing process, which defines how the transaction is to be settled, defining a settlement obligation group, said group comprising a number of settlement instructions that all must be settled at the same time, and "locking in" of the assets which the transaction concern, the locking-in meaning reserving said assets for a specific settlement instruction. The settlement process comprises selecting transfer instructions for all settlement obligations belonging to said settlement obligation group, said transfer instructions being irrevocable instructions to transfer the assets between participants in the CSD, checking that all transfer instructions are carried out successfully, and reporting the result of the settlement to the participants involved.

Claims:

1. An automated method for carrying out financial transactions within a Central Securities Depository, comprising an automated clearing process and an automated settlement process, the clearing process being the process of preparing the transactions for the settlement...

...be settled, defining a settlement obligation group, said group comprising a number of settlement instructions that all have to be settled at the same time, "locking in" of the assets which the transaction

concern, the locking-in having the effect of reserving said assets for a specific settlement instruction, and the settlement process comprising the following automated sub processes: selecting transfer instructions for all settlement obligations belonging to said settlement obligation group, said transfer instructions being irrevocable instructions to transfer (the locked-in) assets between participants in the CSD, checking that all transfer instructions are carried out successfully, reporting the result of the settlement to the participants involved.

Detailed Description
Claims

Detailed Description

... settling trades in a CSD-system.

TECHNICAL FIELD

The present invention relates to a method and a system for use in a so called Central Securities Depository, commonly abbreviated as CSD. By means of the invention, the clearing and settlement of trades in such a system is facilitated, and settlement can...

...in cross-border

trading, as well as consolidation of securities markets and the underlying infrastructure such as CSD:s. This means that more and more CSD:s serve not only the securities and the participants of a single particular market.

The main functions of a CSD are.

Registration of securities and ownership to

securities

Clearing and settlement of trades in securities

Asset services (also sometimes referred to as corporate actions), e.g. payment of dividend or interest

& Other services, e.g. collateral management for participants.

Clearing (or clearance) can be defined as the process of transmitting, reconciling, and, in some cases, confirming payment orders or security transfer instructions prior to settlement, possibly including the netting of instructions and the establishment of final positions for settlement.

Settlement can be defined as an act that discharges obligations in respect of funds or securities transfers between two or more parties.

CSD:s are based on automated Information Technology (IT) systems - most of which systems are tailored to the traditions and procedures of their home market.

Globalization...

...SUMMARY OF THE INVENTION

There is thus a need for a method and a system by means of which trades can be settled within a CSD-system in an easier and more generalized and flexible manner than previously. This need is addressed by the present invention in that it discloses a method and a system for carrying out clearing and settlement in a Central Securities Depository, the clearing process comprising

* selecting a settlement rule to be followed in the

clearing process, the rule defining how the transaction is to be settled,
defining a settlement obligation group, said group comprising a number of settlement instructions that all have to be settled at the same time,
'locking in' of the assets...

...lock-in of assets" to the clearing process, as disclosed by the invention, it has been possible to arrive at a simplified and generally applicable settlement process comprising:
automatically selecting transfer instructions for all settlement obligations belonging to said settlement obligation group, said transfer instructions being irrevocable instructions to transfer (the locked-in) assets between participants in the CSD,
automatically checking that all transfer instructions are carried out successfully,
automatically reporting the result of the settlement to the participants involved.

BRIEF DESCRIPTION OF...

...a number of collateral management functions (e.g. change of collateral). This is important since systems maintenance becomes easier, and since all routines in a CSD that involve payments or transfer of ownership to securities have considerable audit and security requirements due to the large values handled by many CSDs.

The addition to the clearing process of the concepts of settlement rule, settlement obligation group and lock-in of assets makes it possible to build a simplified settlement process with very wide applications for CSD settlement and related functions.

Select settlement obligation group
Issue irrevocable transfer instructions for the entire group
o Check that all transfer instructions are carried out successfully
Report the successful settlement result to the participants.

Claim

1 An automated method for carrying out financial transactions within a Central Securities Depository, comprising an automated clearing process and an automated settlement process, the clearing process being the process of preparing the transactions for the settlement process, the clearing process comprising the following automated sub processes:
9 selecting a settlement rule to be followed in the clearing process
the rule defining how the transaction is to be settled,

```

* defining a settlement obligation group, said group
comprising a number of settlement instructions that
all have to be settled at the same time,
* 'locking in' of the assets which the transaction
concern, the locking-in having the effect of reserving
said assets for a specific settlement instruction,
and the settlement process comprising the following
automated sub processes:
    selecting transfer instructions for all settlement
obligations belonging to said settlement obligation
group, said transfer instructions being irrevocable
instructions to transfer (the locked-in) assets
between participants in the CSD,
    checking...

...for a settlement
5 process, the function for the clearing process being
arranged to prepare transactions for the settlement
process, with said function for the clearing process
comprising:
    an automated sub-function for the selection of a
settlement rule to be utilised in the clearing
process, the rule defining how the transaction is to
be settled,
    an automated sub-function for the definition of a
settlement obligation group, said group comprising a
number of settlement instructions that all have to be
settled at the same time,
    an automated sub-function for the 'locking in' of the
assets which the transaction concern, the locking-in
having the effect of the system reserving said assets
for a specific settlement instruction,
with the function for the settlement process comprising:
    an automated sub-function for selecting transfer
instructions for all settlement obligations belonging
to said settlement obligation group, said transfer
instructions being irrevocable instructions to
transfer the locked-in assets between participants in
the CSD,
    an automated sub-function for checking that all
transfer instructions are carried out successfully,
0 an automated sub-function for reporting the result of
the...

... book-entry basis in Euroclear. Besides Euronext, whose traditionally domestic CSDs are now part of the Euroclear group, this trend is emerging elsewhere. The London Stock Exchange's recent decision to establish a feed to Euroclear, in addition to the UK's national settlement system, is a good example of the evolution towards user choice for the settlement of stock exchange trades.

New pan-European trading platforms such as virt-x, and, to some extent Nasdaq Europe, also selected Euroclear as a choice of settlement location for their users.

Mergers with domestic CSDs and partnerships with stock exchanges will accelerate the consolidation of activity on the books of a settlement service provider like Euroclear. The merger that Euroclear proposed to Clearstream, which...

... is imperative that existing market regulatory barriers be removed and the introduction of further barriers stopped. First and foremost, this involves the removal of national stock exchange or other regulations that prevent securities holders from depositing and distributing securities in the depository of their choice. In particular, users who choose to trade on a given stock exchange should be allowed to settle their equity transactions in the settlement system of their choice, rather than be forced to use the national CSD of the stock exchange. Otherwise, the European financial market infrastructure will continue to develop with trading and settlement silos, which will effectively create the worst of two worlds...

... clearance/settlement with potential cost-related economies of scope that may be available. However, of paramount importance is that system users would bypass their local CSDs in the trade settlement/clearance and custody process. This is the purest form of direct-access model, and as such offers all the advantages of one-stop shopping. A final benefit is that - by definition - a single set of priority, matching, and other settlement rules are imposed on all European securities market participants, thereby reducing information costs as well as transaction costs for market users. However, the full Eurohub model raises a number of

potential social...

... free of payment into or out of an ICSD.
Securities Borrowing. Securities borrowing is an integral part of the
ICSD securities settlement process. To improve securities settlement
efficiency, ICSD members can become automatic borrowers. Securities
can be borrowed to avoid failed deliveries, to facilitate back-to-back
transactions, to support trading strategies, and to increase the efficiency
of cross-border settlement.

Custody
The ICSDs provide comprehensive wholesale custody services,
ranging from safekeeping and corporate action management to tax recovery
assistance.

Safekeeping. Securities are held for the account of ICSD
members, on a fungible basis, through a network of depositories and other
clearing systems chosen to provide the greatest security and
best possible service for each issue. Because of economies of scale--at
year-end 1993 the two ICSDs were holding more than US\$2.1 trillion--
ICSD safekeeping fees are very competitive.

Securities Lending. To improve the yield on the securities
they hold, ICSD members can become automatic lenders. Safeguards are
designed to ensure that loaned securities are retrieved when needed for
onward delivery.

Collection of...

TEXT:

The focus was on whether the EC should separate Euroclear Bank's operations as an international depository from those of the central securities depositories in the Euroclear family, and whether the EC should define the same regulations for all settlement providers—including agent banks and central securities depositories.

A contentious tit-for-tat battle erupted between BNP Paribas, one of Europe's largest regional banks, and international depository Euroclear over Euroclear's dual...

...allowed to cross-subsidize its CSD (central securities depository) and ICSD (international central securities depository) business," said Jon Lloyd, a senior manager for BNP Paribas Securities Services in London, who spoke on a panel last Monday. "By purchasing local European securities depositories, Euroclear could be creating an unfair competitive advantage to agent banks by taking profits from its CSD activity to fund Euroclear Bank's business activities that compete with agent banks."

Agent banks have no choice but to use Euroclear for settling trades in French, Dutch, Irish and U.K. equities because the international depository also owns the local depository systems in those markets, said Lloyd. However...

It does not pay every country in the world to have a central securities depository (CSD), a settlement system such as Strate.

In Europe, for example, all the countries have their own CSDs. However, maintaining the systems is a costly exercise, Singer says.

Therefore, the nations of Europe are already discussing the possibility of choosing one CSD to settle all the transactions in the European Union.

Singer says SA is one of the few countries in Africa that can afford to develop and implement a CSD.

However, the continent has numerous stock exchanges that need the efficiency and reduction of risk that a CSD can offer.

BGL has \$37 billion in assets under administration, Heger said, and deals with a myriad of transfer agents. When an investor redeems or subscribes to a fund, BGL has to communicate by fax with the counterparties and transfer agents. BGL must first identify the correct transfer agents from hundreds in the market, and the order then needs to be manually processed and settled. The process is time consuming and can result in mistakes, said Heger.

The central securities depositories launched their respective services to streamline communication between fund distributors and transfer agents last year. Both Vestima and FundSettle provide single

 ...platform. "We firmly believe in the benefits of our single platform and
 firmly support the objectives of T2S," Euroclear SA chief executive Pierre

Francotte told Securities Industry News. "If T2S can deliver the most efficient and least expensive transaction-processing platform, then we would expect clients to settle in T2S. Choice will help to ensure ongoing cost reductions and innovation."

Custodian Competition

With the T2S platform, CSDs would retain legal ownership of accounts on their books and continue to provide asset servicing functions such as issuer services, collateral management, corporate actions and securities lending. To replace settlement revenues, the depositories would need to develop those services to attract more business, which could put them into direct competition with...

...concerns: "Putting T2S in a wider perspective, NCSD believes there will be several alternatives and platforms and that it should be up to customers of CSDs to decide which settlement alternatives and types of securities accounts provide the most efficient solution for them."

Euroclear is also questioning how T2S, as an outsourced system, will address liability in the event of...

...from CSDs to large agent banks and international depositories.

New Inefficiencies

Katja Rosenkranz, a member of the board of Clearstream Banking Frankfurt, Germany's national securities depository, says she remains "constructively optimistic" about the T2S project. She declined to estimate its impact on the depository's revenues, noting that the scope of services and technical infrastructure of T2S has yet to be determined. But she does warn that "integrating an external settlement engine would require CSDs to develop high-performance interfaces, remap processes and make changes to existing applications which could lead to cost increases for settlement of domestic transactions."

In...

...says Brandt.

Settlements of transactions in securities issued within the EU can be in either an issuer CSD, the depository in the home market where securities are issued, or an investor CSD--a depository in the home market of the counterparty buying or selling foreign securities. For stock-exchange trades, when clearing takes place through a central counterparty, settlement generally occurs in the local market's CSD. The key exceptions are transactions conducted on Euronext, the London Stock Exchange and SWX Swiss Exchange affiliate virt-x, which allow market players to choose their place of settlement.

The ECSDA said that the easiest and most common links that EU depositories follow is what it defined as the issuer model: the depository of the investor counterparty sending settlement instructions for its clients to the home CSD of the foreign security. "The link is relatively easy to build; it requires construction efforts on the side of the investor CSD but little or...

...trades within the same market.

Cross-border trades entail greater risk as well, since the process often involves a chain of intermediary agent banks and central securities depositories. A delay or failure by any of these parties to deliver securities or cash at any time between execution and the settlement deadline can spoil the entire transaction.

Historically reluctant to intervene in the affairs of Europe's clearing and settlement industry, the European Commission (EC) has finally decided to do so. Its watchword for the effort is harmonization'-a loaded term with two mutually reinforcing implications: uniform market practices and uniform operating procedures...

...tumult of recent years on Europe's clearing and settlement scene should certainly prepare Merere for his new role as chairman of the European Central Securities Depositories Association (ECSDA)-a post he won only two weeks ago, when his predecessor, Giovanni Sabatini, resigned before his tenure was up. Sabatini's abrupt departure was prompted by his relinquishing his role as chief executive of Monte Titoli, Italy's central securities depository, to accept a senior-level position at regulator Consob last month. He could not be reached for comment.

The 55-year old Merere couldn't have asked for a better strategic location from which to help determine the future of Europe's securities processing infrastructure. ...declined to be identified. "It will clearly take away some of our business."

Brussels is the second Euronext market where exchange members will have a choice of settlement location, following the launch of a similar Euroclear Bank service for Euronext Paris trades in July 2002. Euroclear naturally insists that the Euronext Brussels service will not compete with, but rather complement, the settlement service offered by CIK, the Belgian central securities depository, which will remain the natural settlement location for local Belgian counterparties.

However, by consolidating Euronext Brussels and Euronext Paris settlement activity in Euroclear Bank, clients...

...action information gathering and dissemination and record date and ex-date schedules standardized across Europe; withholding tax legal procedures harmonized; restrictions on account-opening at central securities depositories axed; and the European Union to agree on a single legal definition of ownership and transfer of dematerialized securities.

The trade group briefly reiterated a point made ...far longer timetable. In standardizing corporate actions processing, the ESF is seeking the creation of an "expert group" to work out a model. A single definition of securities ownership and transfer is assigned to a second "expert group" working under the direction of the European Commission. Standardizing settlement timetables depends on an agreement with the European Central Securities Depository Association, a trade group representing European local depositories.

...oversee, if anyone. The EC is just one of several organizations studying clearance and settlement. Other groups examining the issue include: the Committee of European Securities Regulators, the European Central Bank, and the Group of 30, an informal group of the world's largest financial institutions.

The focus was on whether the EC should separate Euroclear Bank's operations as an international depository from those of the central securities depositories in the Euroclear family, and whether the EC should define the same regulations for all settlement

providers-including agent banks and central securities depositories.

A contentious tit-for-tat battle erupted between BNP Paribas, one of Europe's largest regional banks, and international depository Euroclear over Euroclear's dual...

...allowed to cross-subsidize its CSD [central securities depository] and ICSD [international central securities depository] business," said Jon Lloyd, a senior manager for BNP Paribas Securities Services in London, who spoke on a panel last Monday. "By purchasing local European securities depositories, Euroclear could be creating an unfair competitive advantage to agent banks by taking profits from its CSD activity to fund Euroclear Bank's business activities that compete with agent banks."

Agent banks have no choice but to use Euroclear for settling trades in French, Dutch, Irish and U.K. equities because the international depository also owns the local depository systems in those markets, said Lloyd. However...

Mandate, pn/a, Sep 2008 DOCUMENT TYPE: Periodical; News LANGUAGE:
English RECORD TYPE: Abstract

...ABSTRACT: Central Bank on July 4. Clearstream and Euroclear, the largest of Europe's post-trade services providers, submitted their expected responses to the Target 2 Securities (T2S) project: conditional support. Euroclear expects to see the crystallisation of the legal and contractual framework for the project; a governance structure that preserves central securities depositories' roles as outsourcers; and concessions in the design of the T2S system to allow efficient functioning of a model in which Euroclear's individual customers will decide whether to settle their transactions using the T2S platform or the Euroclear Single Platform, with the two connected by an appropriate link.

... capable of providing sophisticated collateral management services (CMS) to counterparties, although many financial institutions have their own collateral management capability and will not appoint the ICSD.

Services

The type of service offered can include:

- * marking to market daily credit exposures to establish net collateral requirement;
- * verifying the eligibility of the collateral, where eligibility criteria have been set by the lender;
- * automatic selection of securities to be posted;
- * entering instructions for settlement of securities transfers;
- * substitution of securities where the borrower has rights of substitution; and
- * matching deal terms.

Contractual framework

The contractual framework for the rights and obligations of the lender, the borrower and the ICSD is normally a form of 'tripartite' service agreement and will be entered into between them (although in the case of Global Credit Support Service (GCSS...

Automatic financial transaction method in central securities depository, involves selecting irrevocable transfer instructions to transfer assets between participants in CSD, for all settlement obligations

Alerting Abstract ...NOVELTY - The method involves selecting irrevocable transfer instructions to transfer assets between participants in central securities depository, for all settlement obligations, and checking whether the instructions are carried out successfully. The result of the settlement is reported to the participants involved.

Original Publication Data by Authority

Argentina

Assignee name & address:

Original Abstracts:

The invention discloses a method for financial transactions within a Central Securities Depository, comprising a clearing process and a settlement process, the clearing process being the process of preparing the transactions for the settlement process, with the clearing process comprising selecting a settlement rule to be followed in the clearing process, which defines how the transaction is to be settled, defining a settlement obligation group, said group comprising a number of settlement instructions that all must be settled at the same time, and "locking in" of the assets which the transaction concern, the locking-in meaning reserving said assets for a specific settlement instruction. The settlement process comprises selecting transfer instructions for all settlement obligations belonging to said settlement obligation group, said transfer instructions being irrevocable instructions to transfer the assets between participants in the CSD, checking that all transfer instructions are carried out successfully, and reporting the result of the settlement to the participants involved.

Claims:

1. An automated method for carrying out financial transactions within a Central Securities Depository, comprising an automated clearing process and an automated settlement process, the clearing process being the process of preparing the transactions for the settlement...

...be settled, defining a settlement obligation group, said group comprising a number of settlement instructions that all have to be settled at the same time, "locking in" of the assets which the transaction concern, the locking-in having the effect of reserving said assets

for a specific settlement instruction, and the settlement process comprising the following automated sub processes: selecting transfer instructions for all settlement obligations belonging to said settlement obligation group, said transfer instructions being irrevocable instructions to transfer (the locked-in) assets between participants in the CSD, checking that all transfer instructions are carried out successfully, reporting the result of the settlement to the participants involved.
